DESIGNING TOMORROW'S MOBILTY

MADIC group is developing, installing and servicing multi-energy stations for more than 50 years.

With more than 6,000 fuel stations, 15,000 electric charging points and 25,000 payment terminals, MADIC group is a trusted partner to

It focuses its growth on sustainable development's strategy, with respect for people, the company and the planet. Committed to ecological transition, the MADIC group is investing in zero-emission mobility with a turnkey hydrogen refueling station solution.

YOUR TAILOR-MADE STATION

OUR COMMITMENTS

Flexibility: Each station can be equipped with one or several dispensing devices delivering 350 (H35 / H35HF) and / or 700 bar (H70 / H70HF)

Availablity:

- · Equipment availability rate >95%
- Guarantee of maximum utilization thanks to redundancy equipment (compressors, sensors, etc.)
- Back-up source: possibility to connect to an alternative source (tube trailer type)
- · Operating temperature: -40 to +50°C

Rapidity: Refueling is done in a few minutes only

OUR STRENGTHS

Reliability and efficiency of piston compressors

Hydrogen cooling (down to -40°C) with natural and eco-friendly refrigerants such as CO2 (R744)

Secure payment terminals

MODULARITY

Any type of source:

- · Tube trailer / Cylinders
- · Pipeline

For any type of station:

- · 40-200 kg/day · 200-2000+ kg/day
- For multiple vehicles:
- Forklifts
- · Cars Buses
- Trucks
- Boats
- Trains

capacity and compression)

Modular and scalable design (expandable storage

THE SAINT-ANDRÉ-DE-CUBZAC FACTORY (FRANCE - 33)

The new industrial headquarters of the MADIC group develops its expertise in 3 areas:

World Center (outside of the USA) for electronic repair PAYMENTS and SYSTEMS AMADIC

CUSTOMER EXPERIENCE

14,000 m² of factory and 4,000 m² of offices

- An R&D center of 80 engineers
- Creation of new assembly lines including Hydrogen Distribution
- A secure environment certified by the GIE Cartes Bancaires
- Winner of the Fond de Modernisation Automobile

OUR EXPERTISE

Tailor-made and optimal sizing of the station according to your needs (quantity per filling, daily total quantity, filling sequences, back-to-back, number of load points, pressures).

SÉCURITY

Fast and international deployment of hydrogen mobility requires stringent regulations, particularly in terms of security for users and operators. The MADIC group is committed to respecting following standards and requirements:

- · CE and PED directive
- · Hydrogen refueling stations: ISO 19880-X series
- · Filling protocol: SAE J2601
- · Vehicle / station communications: SAE J2799 · Vehicle / station connections: EN ISO 17268
- · Hydrogen purity: ISO 14687

Realization of a risk analysis, definition of ATEX zones, securing the installation (shut-off valves, pressure relief devices, vents, sensors, etc.)

IFSF secure payment protocol

OUR JOBS

- · Advice
- · Engineering
- · Distribution Installation
- · Commissioning
- Inspection
- · Predictive, regulatory, preventive and curative maintenance

) OUR STRENGTH: MASTERING THE METROLOGY CHAIN

QUALITY

System (ISO 9001, 14001, 45001) and technical qualifications:

- · Legal metrology manufacturer (EMLAE, DLS, OIML)
- · Legal metrology repair (EMLAE, DLS, OIML)
- · Periodic verification (EMLAE, CRM, IPFNA)
- · ICPE inspections, sealing of buried tanks
- · QUALIFELEC (LCPT, IRVE, SPV)
- · KIWA
- · ATEX
- \cdot TQM
- · EMV
- · PCI · GIE CB
- · Visa / Mastercard

24/7 helpdesk - level 1 and 2 assistance

Dedicated technical service – level 3 assistance

Administrative procedures assistance: Declaration and authorization

ElysOnline remote supervision system also used on petrol and CNG stations:

- · Quickly inform the operator of the state of the station
- · Anticipate the interventions to be carried out
- · Improve station performance
